Sub A1

Abstract

In a method for graphically representing and/or processing
values of data types of a formally defined data structure
existing as a value tree, a window is assigned as a graphical
user interface to the data structure. Generic, scalable,
graphical user-interface components are inserted
hierarchically in the window, the value tree of the data
structure being mapped onto the user-interface components.
The graphical user-interface components are in a relation to
the nodes of the value tree that is recognizable to the user.
A graphical or textual representation of the value is
selectable for each subtree of the value tree.
